INDEX TO
EXPERIMENTAL MECHANICS
VOLUME 9, 1969

SUBJECT INDEX

Accurate Determination of Interference in Pin Joints—AKELLA KAMESWARA RAO, 45–48 (Jan.).

Adverse Environments, Strain-gage Installations for—ARTHUR J. BUSH, 27N–33N (April).

Aircraft-turbine-engine Development, Temperature Measurement of—ROBERT E. GORTON, 27N–34N (May).

Aerospace Laboratories, Organization Concepts for—ROYAL B. JACKMAN, 23N–27N (Dec.).

Aluminum-copper Alloy, Effect of Stress Biaxiality on the High-strain Fatigue Behavior of an—J. R. CROSBY, D. J. BURNS and P. P. BENHAM, 305–312 (July).

Aluminum Cylinders in Axial Compression, Experimental Creep Buckling of—R. PAPIRNO and R. GOLDMAN, 356–365 (Aug.).

Analogue Technique for Determining Torsion and Flexure Functions of Uniform Beams, An—BHASKAR NATH, 117–122 (March).

Aluminum Bars, Electromagnetic Velocity-transducer Studies of Plastic Waves in—L. EFRON and L. E. MALVERN, 255–262 (June).

Amorphous Solids, A Microstructure Theory of Photoelastic Behavior in—NIELS C. LIND, 424–428 (Sept.).

Application of Birefringent Coatings to Glass-fiber-reinforced Plastics—J. W. DALLY and I. ALFIREVICH, 97–102 (March).

Automated Process for Three-dimensional Photoelastic Analysis—WARREN C. YOUNG, 275–280 (June).

Automatic System for Scattered-light Photoelasticity—Y. F. CHENG, 407–412 (Sept.).

Axially Loaded Sections, Two-dimensional Study of Transverse Stresses in—H. B. PHILLIPS and C. L MANTEI, 137–139 (March).

Axial-tension, Rotating-beam and Pressurized-cylinder Fatigue Tests, A Comparison of Results of—R. EISENSTADT, D. P. KENDALL and T. E. DAVIDSON, 250–254 (June).

Beams, Interlaminar Shear Stress in Sandwich—Robert A. Heller, 413—418 (Sept.).

Biaxial-stress Fields, Study of Residual Stresses in Linearly Varying—H. V. CORDIANO and V. L. SALERNO, 17–24 (Jan.).

Birefringent Polymers, Optical and Mechanical Properties of—C. V. JOHNSON, III and W. GOLDSMITH, 263–268 (June).

Bones of the Skull, Determination of Mechanical Properties of the—D. H. ROBBINS and J. L. WOOD, 236–240 (May).

Brittle Coating, Detection of Lueders' Lines by Means of—DIETER RADAJ, 110–116 (March).

Buckling of Folded-plate Structures—S. E. SWARTZ, M. L. MIKHAIL and S. A. GURALNICK, 269–274 (June).

Buckling of Spherical Sandwich Shells—M. S. LIN and E. P. POPOV, 433–440 (Oct.).

Camera, Recording Dynamic Fringe Patterns with a Cranz-Schardin—W. F. RILEY and J. W. DALLY, 27N–33N (Aug.).

Circular Ring, Stress and Finite-strain Analysis of a, under Diametral Compression—A. J. DURELLI, V. J. PARKS and T. L. CHEN, 210–214 (May).

Compensation Methods, Accuracy of, in Photoelastic Fringe-order Measurements—S. K. CHAKRABARTI and K. E. MACHIN, 429–431 (Sept.).

Conical Bars, Internal-strain Measurements of Longitudinal Pulses in—J. L. LEWIS, W. GOLDSMITH and D. M. CUNNINGHAM, 313–320 (July).

Copper, The Strain-rate Effect and the Incremental Plastic Wave in—C. H. YEW and H. A. RICHARDSON, JR., 366–373 (Aug.).

Crack Tip, Measurement of Microscopic Plastic-strain Distributions in the Region of a—J. H. UNDERWOOD and D. P. KENDALL, 296–304 (July).

PUBLISHED BY SOCIETY FOR EXPERIMENTAL STRESS ANALYSIS, 21 BRIDGE SQUARE, WESTPORT, CONN. 06880

INDEX TO
EXPERIMENTAL MECHANICS
VOLUME 9, 1969

SUBJECT INDEX

Accurate Determination of Interference in Pin Joints—AKELLA KAMESWARA RAO, 45–48 (Jan.).

Adverse Environments, Strain-gage Installations for—ARTHUR J. BUSH, 27N–33N (April).

Aircraft-turbine-engine Development, Temperature Measurement of—ROBERT E. GORTON, 27N–34N (May).

Aerospace Laboratories, Organization Concepts for—ROYAL B. JACKMAN, 23N–27N (Dec.).

Aluminum-copper Alloy, Effect of Stress Biaxiality on the High-strain Fatigue Behavior of an—J. R. CROSBY, D. J. BURNS and P. P. BENHAM, 305–312 (July).

Aluminum Cylinders in Axial Compression, Experimental Creep Buckling of—R. PAPIRNO and R. GOLDMAN, 356–365 (Aug.).

Analogue Technique for Determining Torsion and Flexure Functions of Uniform Beams, An—BHASKAR NATH, 117–122 (March).

Aluminum Bars, Electromagnetic Velocity-transducer Studies of Plastic Waves in—L. EFRON and L. E. MALVERN, 255–262 (June).

Amorphous Solids, A Microstructure Theory of Photoelastic Behavior in—NIELS C. LIND, 424–428 (Sept.).

Application of Birefringent Coatings to Glass-fiber-reinforced Plastics—J. W. DALLY and I. ALFIREVICH, 97–102 (March).

Automated Process for Three-dimensional Photoelastic Analysis—WARREN C. YOUNG, 275–280 (June).

Automatic System for Scattered-light Photoelasticity—Y. F. CHENG, 407–412 (Sept.).

Axially Loaded Sections, Two-dimensional Study of Transverse Stresses in—H. B. PHILLIPS and C. L MANTEI, 137–139 (March).

Axial-tension, Rotating-beam and Pressurized-cylinder Fatigue Tests, A Comparison of Results of—R. EISENSTADT, D. P. KENDALL and T. E. DAVIDSON, 250–254 (June).

Beams, Interlaminar Shear Stress in Sandwich—Robert A. Heller, 413—418 (Sept.).

Biaxial-stress Fields, Study of Residual Stresses in Linearly Varying—H. V. CORDIANO and V. L. SALERNO, 17–24 (Jan.).

Birefringent Polymers, Optical and Mechanical Properties of—C. V. JOHNSON, III and W. GOLDSMITH, 263–268 (June).

Bones of the Skull, Determination of Mechanical Properties of the—D. H. ROBBINS and J. L. WOOD, 236–240 (May).

Brittle Coating, Detection of Lueders' Lines by Means of—DIETER RADAJ, 110–116 (March).

Buckling of Folded-plate Structures—S. E. SWARTZ, M. L. MIKHAIL and S. A. GURALNICK, 269–274 (June).

Buckling of Spherical Sandwich Shells—M. S. LIN and E. P. POPOV, 433–440 (Oct.).

Camera, Recording Dynamic Fringe Patterns with a Cranz-Schardin—W. F. RILEY and J. W. DALLY, 27N–33N (Aug.).

Circular Ring, Stress and Finite-strain Analysis of a, under Diametral Compression—A. J. DURELLI, V. J. PARKS and T. L. CHEN, 210–214 (May).

Compensation Methods, Accuracy of, in Photoelastic Fringe-order Measurements—S. K. CHAKRABARTI and K. E. MACHIN, 429–431 (Sept.).

Conical Bars, Internal-strain Measurements of Longitudinal Pulses in—J. L. LEWIS, W. GOLDSMITH and D. M. CUNNINGHAM, 313–320 (July).

Copper, The Strain-rate Effect and the Incremental Plastic Wave in—C. H. YEW and H. A. RICHARDSON, JR., 366–373 (Aug.).

Crack Tip, Measurement of Microscopic Plastic-strain Distributions in the Region of a—J. H. UNDERWOOD and D. P. KENDALL, 296–304 (July).

PUBLISHED BY SOCIETY FOR EXPERIMENTAL STRESS ANALYSIS, 21 BRIDGE SQUARE, WESTPORT, CONN. 06880

Creep Buckling, Experimental, of Aluminum Cylinders in Axial Compression—R. PAPIRNO and R. GOLDMAN, 356–365 (Aug.).
Cylinders, Experimental Evaluation of Incremental Theories for Nonproportionate Loading of Thin-walled—J. L. SCHLAFER and O. M. SIDEBOTTOM, 500–506 (Nov.).

Defect Microstructure and Mechanical Properties in Shock-hardened Metals—L. E. MURR and F. I. GRACE, 145–155 (April).
Deformation Produced During Deep Punching—T. A. C. STOCK and T. O. MULHEARN, 230–235 (May).
Digital Computer, The Application of a, to Mechanical Testing—JAMES H. SMITH, 23N–28N (Nov.)
Discontinuities, Structural, Thermal-stress Concentration Caused by—A. F. EMERY, J. A. WILLIAMS and J. AVERY, 558–564 (Dec.).
Disk, Thin, Thermally Induced Natural-frequency Variations in a—C. D. MOTE, JR. and J. E. RAKOWSKI, 1–8 (Jan.).
Dynamometers, Measurement of Forces Exerted in the Correction of Idiopathic Scoliosis Using Three-component—A. B. SCHULTZ and J. O. GALANTE, 419–423 (Sept.).

Electromagnetic Velocity-transducer Studies of Plastic Waves in Aluminum Bars—L. EFRON and L. E. MALVERN, 255–262 (June).
Embedded Grids, Moiré Interferometry with—Effect of Optical Refraction—R. L. KERBER and J. S. WHITTIER, 203–209 (May).
Equipment, New, for Cyclic Biaxial Testing—D. G HAVARD and T. H. TOPPER, 550–557 (Dec.).
Expanding Ring, Stress–Strain Data Obtained at High Rates Using an—C. R. HOGGATT and R. F. RECHT, 441–448 (Oct.).
Experimental–Theoretical Correlations of Impulsively Loaded Clamped Circular Plates—T. A. DUFFEY and S. W. KEY, 241–249 (June).

Fatigue Behavior, Effect of Stress Biaxiality on the High-strain, of an Aluminum-copper Alloy—J. R. CROSBY, D. J. BURNS and P. P. BENHAM, 305–312 (July).
Fatigue Cracks in Sheet Glassy Plastics, Growth of Part-through and Through-thickness—B. MUKHERJEE, L. E. CULVER and D. J. BURNS, 90–96 (Feb.).
Fatigue Cracks, Ultrasonic Detection and Measurement of, in Notched Specimens—S. J. KLIMA and J. C. FRECHE, 193–202 (May).
Fatigue Precracking of Spin-burst Toughness Specimens—W. G. CLARK, JR. and L. J. CESCHINI, 123–128 (March).
Fatigue Testing, Environmental, of Molded Plastics for Prosthetic Heart Valves—O. A. PRINGLE and R. J. HARKER, 171–178 (April).
Fatigue Tests, A Comparison of Results of Axial-tension, Rotating-beam and Pressurized-cylinder—R. EISENSTADT, D. P. KENDALL and T. E. DAVIDSON, 250–254 (June).
Films, Residual Stresses in Evaporated Al-Si—N. G. WU and Q. K. YUAN, 519–522 (Nov.).
Folded-plate Structures, Buckling of—S. E. SWARTZ, M. L. MIKHAIL and S. A. GURALNICK, 269–274 (June).
Fracture Data and Stress–Strain Behavior of Rocks in Triaxial Compression—J. L. SMITH, K. L. DEVRIES, D. J. BUSHNELL and W. S. BROWN, 348–355 (Aug.).
Fracture Mechanics, Applications of Holography to—THOMAS D. DUDDERAR, 281–285 (June).
Friction, Estimating the Dynamic Coefficient of, from Experimental Data: the Motion of a Rocket Inside a Smoothbore Launcher—ROBERT S. ROTH, 565–570 (Dec.).
Fringe Patterns, Determining Isoclinics from—H. BECKER and A. COLAO, 469–472 (Oct.).
Fringe Patterns, Recording Dynamic, with a Cranz-Schardin Camera—W. F. RILEY and J. W. DALLY, 27N–33N (Aug.).

Gage, Ultrasonic Thickness—J. H. MEIER, 215–219 (May).
Gamma Rays, Some Applications of Fixation of Photoelastic-fringe Patterns by—SHŌHACHIRŌ MIYAZONO, 473–477 (Oct.).
Graphical Methods for Determining the Resulting Photoelastic Effect of Compound States of Stress—HORST SCHWIEGER, 67–74 (Feb.).
Grid Method, The—VINCENT J. PARKS, 27N–33N (July).
Grids, Production of High-density Moiré—Discussion by FU-PEN CHIANG, 286–288 (June).

Heart Valves, Environmental Fatigue Testing of Molded Plastics for Prosthetic—O. A. PRINGLE and R. J. HARKER, 171–178 (April).
High-g Environments, Strain Gages in—DAVID L. WILLIS, 27N–30N (Oct.).
High-velocity Deformation Properties of Polyurethane Foams—S. J. GREEN, F. L. SCHIERLOH, R. D. PERKINS and S. G. BABCOCK, 103–109 (March).
Hologram Projection on Curved Image Planes—GERALD B. BRANDT, 142–144 (March).
Holography, Applications of, to Fracture Mechanics—THOMAS D. DUDDERAR, 281–285 (June).

Idiopathic Scoliosis Using Three-component Dynamometers, Measurement of Forces Exerted in the Correction of—A. B. SCHULTZ and J. O. GALANTE, 419–423 (Sept.).
Inclusions, Rigid, A Procedure for Producing Photoelastic Models with—WALTER EDELMAN, JR., 380–381 (Aug.).
Incremental Theories for Nonproportionate Loading of Thin-walled Cylinders, Experimental Evaluation of—J. L. SCHLAFER and O. M. SIDEBOTTOM, 500–506 (Nov.).
In-situ Movement Detection and Measurement, A New Device for—BLAHOSLAV KOŠŤÁK, 374–379 (Aug.).
Interferometry, Measurement of Small Deformation of Actual Materials by Reflection—MAHMOOD H. RANA, 82–89 (Feb.).
Internal-strain Measurements of Longitudinal Pulses in Conical Bars—J. L. LEWIS, W. GOLDSMITH and D. M. CUNNINGHAM, 313–320 (July).
Isoclinics from Fringe Patterns, Determining—H. BECKER and A. COLAO, 469–472 (Oct.).

Laboratories, Organization Concepts for Aerospace—ROYAL B. JACKMAN, 23N–27N (Dec.).
Laboratory, Organization of a Small—SIGMUND BLACK, 27N–31N (Sept.).
Large-strain Analysis, On the Definitions of Strain and Their Use in—Discussion by CARLOS DEL RIO, 432 (Sept.).
Laser-beam Technique in Thermal-shock testing, Application of the—D. R. AXELRAD and T. R. HSU, 507–512 (Nov.).
Launcher, the Motion of a Rocket Inside a Smoothbore, Estimating the Dynamic Coefficient of Friction from Experimental Data—ROBERT S. ROTH, 565–570 (Dec.).
Leg Brace, Investigation of the Performance of an Ischial Load-bearing—G. S. KIRKPATRICK, E. E. DAY and J. F. LEHMANN, 31–35 (Jan.).
Loading, Stresses in Case-bonded Solid-propellent Rocket Motors under Transverse Body-force—R. REID PARMERTER, 571–576 (Dec.).
Longitudinal Pulses in Conical Bars, Internal-strain Measurements of—J. L. LEWIS, W. GOLDSMITH and D. M. CUNNINGHAM, 313–320 (July).
Lueders' Lines, Detection of, by Means of Brittle Coating—DIETER RADAJ, 110–116 (March).

Measurement of Small Deformation of Actual Materials by Reflection Interferometry—MAHMOOD H. RANA, 82–89 (Feb.).
Mechanical–Optical Properties of Polycarbonate Resin and Some Relations with Material Structure—GARY L. CLOUD, 489–499 (Nov.).

Mechanical Properties, Determination of, of the Bones of the Skull—D. H. ROBBINS and J. L. WOOD, 236–240 (May).
Mechanical Testing, The Application of a Digital Computer to—JAMES H. SMITH, 23N–28N (Nov.).
Metals, Defect Microstructure and Mechanical Properties in Shock-hardened—L. E. MURR and F. I. GRACE, 145–155 (April).
Metals, Dynamic Stress-Strain Characteristics of, at High Temperatures—H. WATSON, JR. and E. A. RIPPERGER, 289–295 (July).
Microstructure Theory of Photoelastic Behavior in Amorphous Solids—NIELS C. LIND, 424–428 (Sept.).
Mining Excavations, A Photoelastic-model Study of Stress Distribution and Rock Fracture around—Z. T. BIENIAWSKI and C. P. G. VAN TONDER, 75–81 (Feb.).
Model, Composite, Three-dimensional Photoelastic Analysis of a Fiber-reinforced—R. H. MARLOFF and I. M. DANIEL, 156–162 (April).
Model Making and Slicing for Three-dimensional Photoelasticity—ROBERT L. JOHNSON, 23N–32N (March).
Mohr's Circle Presentation on an Oscilloscope—R. B. MELTON, JR., 41–44 (Jan.).
Moiré-fringe Multiplication by Means of Filtering and a Wave-front Reconstruction Process—CESAR A. SCIAMMARELLA, 179–185 (April).
Moiré-fringe Patterns, Techniques of Optical Spatial Filtering Applied to the Processing of—FU-PEN CHIANG, 523–526 (Nov.).
Moiré Interferometry with Embedded Grids—Effect of Optical Refraction—R. L. KERBER and J. S. WHITTIER, 203–209 (May).
Moment–Curvature Models under Reverse Cyclic Straining—A. N. SHERBOURNE and S. KRISHNASAMY, 36–40 (Jan.).

Nodes and Antinodes, Visualization of, in Vibrating Plates—Discussion by PERICLES S. THEOCARIS, 382–384 (Aug.).
Nonlinear Foundation, Photoelastic Analysis of an Orthotropic Plate on a—R. O. CASE and S. C. GAMBRELL, 481–488 (Nov.).
Nonproportionate Loading of Thin-walled Cylinders, Experimental Evaluation of Incremental Theories for—J. L. SCHLAFER and O. M. SIDEBOTTOM, 500–506 (Nov.).
Notched Specimens, Ultrasonic Detection and Measurement of Fatigue Cracks in—S. J. KLIMA and J. C. FRECHE, 193–202 (May).

Optical and Mechanical Properties of Birefringent Polymers—C. V. JOHNSON, III and W. GOLDSMITH, 263–268 (June).
Optical-rotation Effect in Photoelastic Shell Analysis, The—J. D. RIERA and R. MARK, 9–16 (Jan.).
Optical Spatial Filtering Applied to the Processing of Moiré-fringe Patterns, Techniques of—FU-PEN CHIANG, 523–526 (Nov.).
Optical Theory of the Multilayer-reflection Technique for Three-dimensional Photoelastic Studies—HILLAR ABEN, 25–30 (Jan.).
Orthotropic Plate, Photoelastic Analysis of an, on a Nonlinear Foundation—R. O. CASE and S. C. GAMBRELL, 481–488 (Nov.).
Oscilloscope, Mohr's Circle Presentation on an—R. B. MELTON, JR., 41–44 (Jan.).
Out-of-plane Restraint on Plane-stress Solutions near Straight Boundaries, The Effect of—W. J. RHINES and J. T. WAJDA, 513–518 (Nov.).

Photoelastic Analysis, An Automated Process for Three-dimensional—WARREN C. YOUNG, 275–280 (June).
Photoelastic Analysis of an Orthotropic Plate on a Nonlinear Foundation—R. O. CASE and S. C. GAMBRELL, 481–488 (Nov.).
Photoelastic and Mechanical Model Materials, Linear Limit Stresses of Some—E. W. KIESLING and J. T. PINDERA, 337–347 (Aug.).
Photoelastic Behavior in Amorphous Solids, A Microstructure Theory of—NIELS C. LIND, 424–428 (Sept.).
Photoelastic Determination of Stresses in the Tube Plate of a 70-mw Steam Generator—FERIT ARAV, 449–455 (Oct.).
Photoelastic Fringe-order Measurements, Accuracy of Compensation Methods in—S. K. CHAKRABARTI and K. E. MACHIN, 429–431 (Sept.).
Photoelastic-fringe Patterns by Gamma Rays, Some Applications of Fixation of—SHOHACHIRO MIYAZONO, 473–477 (Oct.).
Photoelastic Glass Inclusions, Stress Evaluation in Low-modulus and Viscoelastic Materials Using—IVOR HAWKES, 58–66 (Feb.).
Photoelastic-model Study of Stress Distribution and Rock Fracture around Mining Excavations, A—Z. T. BIENIAWSKI and C. P. G. VAN TONDER, 75–81 (Feb.).
Photoelastic Models with Rigid Inclusions, A Procedure for Producing—WALTER EDELMAN, JR., 380–381 (Aug.).
Photoelastic Studies, A Generalized Method for, of Transient Thermal Stresses—CHRISTIAN P. BURGER, 529–537 (Dec.).
Photoelastic Studies of Ultrasonic Waves in a Large Plate—HUI PIH and L. S. SNYDERS, 186–192 (April).
Photoelastic Studies, Optical Theory of the Multilayer-reflection Technique for Three-dimensional—HILLAR ABEN, 25–30 (Jan.).
Photoelastic, Three-dimensional, Analysis of a Fiber-reinforced Composite Model—R. H. MARLOFF and I. M. DANIEL, 156–162 (April).
Photoelasticity, A Multiple-pulse Ruby-laser System for Dynamic Photomechanics: Applications to Transmitted- and Scattered-light—R. E. ROWLANDS, C. E. TAYLOR and I. M. DANIEL, 385–393 (Sept.).
Photoelasticity, Analysis of Scattered-light Methods in—L. S. SRINATH, 463–468 (Oct.).
Photoelasticity, An Automatic System for Scattered-light—Y. F. CHENG, 407–412 (Sept.).
Photoelasticity, Application of Two-dimensional, to the Study of Acceleration of Stresses under Quasi-static Conditions—JUDSON R. GRIFFIN, 220–224 (May).
Photoelasticity, Model Making and Slicing for Three-dimensional—ROBERT L. JOHNSON, 23N–32N (March).
Photoelasticity, On the Fidelity of High-speed Photographic Systems for Dynamic—J. W. DALLY, A. HENZI and D. LEWIS, 394–400 (Sept.).
Photographic Systems, On the Fidelity of High-speed, for Dynamic Photoelasticity—J. W. DALLY, A. HENZI and D. LEWIS, 394–400 (Sept.).
Photothermoelastic Investigation of Stresses in a Composite Model—T. E. BLEJWAS, W. D. LAUFFER and T. R. TAUCHERT, 478–480 (Oct.).
Photoviscoelastic Analysis of Time-dependent Stresses in a Polyphase System, A—ERRATA: R. M. HACKETT and E. M. KROKOSKY, 528 (Nov.).
Pin Joints, Accurate Determination of Interference in—AKELLA KAMESWARA RAO, 45–48 (Jan.).
Plane-shear Measurement with Strain Gages—C. C. PERRY, 19N–22N (Jan.).
Plane-stress Solutions near Straight Boundaries, The Effect of Out-of-plane Restraint on—W. J. RHINES and J. T. WAJDA, 513–518 (Nov.).
Planes, Hologram Projection on Curved Image—GERALD B. BRANDT, 142–144 (March).
Plastic-strain Distributions in the Region of a Crack Tip, Measurement of Microscopic—J. H. UNDERWOOD and D. P. KENDALL, 296–304 (July).
Plastic Wave in Copper, The Strain-rate Effect and the Incremental—C. H. YEW and H. A. RICHARDSON, JR., 366–373 (Aug.).
Plastic Waves in Aluminum Bars, Electromagnetic Velocity-transducer Studies of—L. EFRON and L. E. MALVERN, 255–262 (June).
Plastics, Application of Birefringent Coatings to Glass-fiber-reinforced—J. W. DALLY and I. ALFIREVICH, 97–102 (March).
Plastics, Environmental Fatigue Testing of Molded, for Prosthetic Heart Valves—O. A. PRINGLE and R. J. HARKER, 171–178 (April).
Plastics, Growth of Part-through and Through-thickness Fatigue Cracks in Sheet Glassy—B. MUKHERJEE, L. E. CULVER and D. J. BURNS, 90–96 (Feb.).
Plate, Stress Measurements in an Infinite, with a Hole Reinforced by Different Materials—SHIN-ICHI SUZUKI, 332–336 (July).
Plates, Crack-opening Displacements and Normal Strains in Centrally Notched—A. S. KOBAYASHI, W. L. ENGSTROM and B. R. SIMON, 163–170 (April).

Plates, Experimental–Theoretical Correlations of Impulsively Loaded Clamped Circular—T. A. DUFFEY and S. W. KEY, 241–249 (June).
Plates, Visualization of Nodes and Antinodes in Vibrating—Discussion by PERICLES S. THEOCARIS, 382–384 (Aug.).
Poisson's Ratio Determined with Strain Rosettes—H. W. SMITH and R. E. CHAPEL, 140–141 (March).
Polycarbonate Resin, Mechanical–Optical Properties of, and Some Relations with Material Structure—GARY L. CLOUD, 489–499 (Nov.).
Polyurethane Foams, High-velocity Deformation Properties of—S. J. GREEN, F. L. SCHIERLOH, R. D. PERKINS and S. G. BABCOCK, 103–109 (March).
Pressurized Strength Specimens, Bending Stresses in Out-of-round Uni- and Multi-axial Internally—D. P. H. HASSELMAN, 527–528 (Nov.).
Principal Stresses, Separation of, in the Freezing Method—Discussion by ROBERT L. JOHNSON, 432 (Sept.).
Protuberances, Some Experiments on the Effect of Isolated, on Flow Through Tubes—D. F. YOUNG and C. C. SHIH, 225–229 (May).
Punching, The Deformation Produced During Deep—T. A. C. STOCK and T. O. MULHEARN, 230–235 (May).

Residual Stresses in Evaporated Al-Si Films—N. G. WU and Q. K. YUAN, 519–522 (Nov.).
Residual Stresses, Study of, in Linearly Varying Biaxial-stress Fields—H. V. CORDIANO and V. L. SALERNO, 17–24 (Jan.).
Resonant Frequencies, Some Implications of Vibration Testing of Continuous Systems for—KENNETH G. MCCONNELL, 321–326 (July).
Reverse Cyclic Straining, Moment–Curvature Models under—A. N. SHERBOURNE and S. KRISHNASAMY, 36–40 (Jan.).
Rocket Motors, Stresses in Case-bonded Solid-propellent, under Transverse Body-force Loading—R. REID PARMERTER, 571–576 (Dec.).
Rocket, the Motion of, Inside a Smoothbore Launcher, Estimating the Dynamic Coefficient of Friction from Experimental Data—ROBERT S. ROTH, 565–570 (Dec.).
Rocks, Experimental Determination of Viscosity of—MAHMOOD H. RANA, 538–549 (Dec.).
Rocks in Triaxial Compression, Fracture Data and Stress–Strain Behavior of—J. L. SMITH, K. L. DEVRIES, D. J. BUSHNELL and W. S. BROWN, 348–355 (Aug.).
Ruby-laser, A Multiple-pulse, System for Dynamic Photomechanics: Applications to Transmitted- and Scattered-light Photoelasticity—R. E. ROWLANDS, C. E. TAYLOR and I. M. DANIEL, 385–393 (Sept.).

Scattered-light Methods in Photoelasticity, Analysis of—L. S. SRINATH, 463–468 (Oct.).
Scratch Gage, Development of the—FRANCIS G. TATNALL, 27N–34N (June).
Shell Analysis, The Optical-rotation Effect in Photoelastic—J. D. RIERA and R. MARK, 9–16 (Jan.).
Shells, Buckling of Spherical Sandwich—M. S. LIN and E. P. POPOV, 433–440 (Oct.).
Shells, Stresses in Shallow Axisymmetric, Using a Casting Procedure—W. SOEDEL and R. COHEN, 129–136 (March).
Slip Rings, Less, More Strain Gages—WILLIAM J. KELLAR, 19N–20N (Feb.).
Spin-burst Toughness Specimens, Fatigue Precracking of—W. G. CLARK, JR. and L. J. CESCHINI, 123–128 (March).
Steam Generator, Photoelastic Determination of Stresses in the Tube Plate of a 70-mw—FERIT ARAV, 449–455 (Oct.).
Strain Gage, Evaluation of a, Having Long-time Stability Characteristics—CARL BERWANGER, 401–406 (Sept.).
Strain-gage Installations for Adverse Environments—ARTHUR J. BUSH, 27N–33N (April).
Strain Gages in High-g Environments—DAVID L. WILLIS, 27N–30N (Oct.).
Strain Gages, More,—Less Slip Rings—WILLIAM J. KELLAR, 19N–20N (Feb.).
Strain Gages, Plane-shear Measurement with—C. C. PERRY, 19N–22N (Jan.).
Strain, On the Definitions of, and Their Use in Large-strain Analysis—Discussion by CARLOS DEL RIO, 432 (Sept.).
Strain-rate Effect and the Incremental Plastic Wave in Copper, The—C. H. YEW and H. A. RICHARDSON, JR., 366–373 (Aug.).
Strain Rosettes, Poisson's Ratio Determined with—H. W. SMITH and R. E. CHAPEL, 140–141 (March).
Strains, Normal, in Centrally Notched Plates, Crack-opening Displacements and—A. S. KOBAYASHI, W. L. ENGSTROM and B. R. SIMON, 163–170 (April).
Stress Analysis, Experimental Methods of X-ray—D. N. FRENCH and B. A. MACDONALD, 456–462 (Oct.).
Stress Biaxiality, Effect of, on the High-strain Fatigue Behavior of an Aluminum-copper Alloy—J. R. CROSBY, D. J. BURNS and P. P. BENHAM, 305–312 (July).
Stress Evaluation in Low-modulus and Viscoelastic Materials Using Photoelastic Glass Inclusions—IVOR HAWKES, 48–66 (Feb.).
Stress and Finite-strain Analysis of a Circular Ring under Diametral Compression—A. J. DURELLI, V. J. PARKS and T. L. CHEN, 210–214 (May).
Stress, Graphical Methods for Determining the Resulting Photoelastic Effect of Compound States of—HORST SCHWIEGER, 67–74 (Feb.).
Stress, Interlaminar Shear, in Sandwich Beams—ROBERT A. HELLER, 413–418 (Sept.).
Stress Measurements in an Infinite Plate with a Hole Reinforced by Different Materials—SHIN-ICHI SUZUKI, 332–336 (July).
Stress–Strain, Dynamic, Characteristics of Metals at Elevated Temperatures—H. WATSON, JR. and E. A. RIPPERGER, 289–295 (July).
Stress–Strain Data Obtained at High Rates Using an Expanding Ring—C. R. HOGGATT and R. F. RECHT, 441–448 (Oct.).
Stress Waves, Thermally Generated, in a Dispersive Elastic Rod—C. M. PERCIVAL and J. A. CHENEY, 49–57 (Feb.).
Stresses, A Generalized Method for Photoelastic Studies of Transient Thermal—CHRISTIAN P. BURGER, 529–537 (Dec.).
Stresses, Bending, in Out-of-round Uni- and Multi-axial Internally Pressurized Strength Specimens—D. P. H. HASSELMAN, 527–528 (Nov.).
Stresses in Case-bonded Solid-propellent Rocket Motors under Transverse Body-force Loading—R. REID PARMERTER, 571–576 (Dec.).
Stresses in a Composite Model, Photothermoelastic Investigation of—T. E. BLEJWAS, W. D. LAUFFER and T. R. TAUCHERT, 478–480 (Oct.).
Stresses in Shallow Axisymmetric Shells Using a Casting Procedure—W. SOEDEL and R. COHEN, 129–136 (March).
Stresses, Linear Limit, of Some Photoelastic and Mechanical Model Materials—E. W. KIESLING and J. T. PINDERA, 337–347 (Aug.).
Stresses under Quasi-static Conditions, Application of Two-dimensional Photoelasticity to the Study of Acceleration—JUDSON R. GRIFFIN, 220–224 (May).

Temperatures, Dynamic Stress–Strain Characteristics of Metals at Elevated—H. WATSON, JR. and E. A. RIPPERGER, 289–295 (July).
Test Equipment, Justifying Capital Expenditures for—J. ALBERT ROY, 32N–34N (Sept.).
Testing, New Equipment for Cyclic Biaxial—D. G. HAVARD and T. H. TOPPER, 550–557 (Dec.).
Thermally Generated Stress Waves in a Dispersive Elastic Rod—C. M. PERCIVAL and J. A. CHENEY, 49–57 (Feb.).
Thermally Induced Natural-frequency Variations in a Thin Disk—C. D. MOTE, JR. and J. E. RAKOWSKI, 1–8 (Jan.).
Thermal-shock testing, Application of the Laser-beam Technique in—D. R. AXELRAD and T. R. HSU, 507–512 (Nov.).
Thermal-stress Concentration Caused by Structural Discontinuities—A. F. EMERY, J. A. WILLIAMS and J. AVERY, 558–564 (Dec.).
Thermal Strains, An Experimental Method of Determining—D. J. HAINES and G. P. WRIGHT, 327–331 (July).
Temperature Measurement of Aircraft-turbine-engine Development—ROBERT E. GORTON, 27N–34N (May).

Triaxial Compression, Fracture Data and Stress–Strain Behavior of Rocks in—J. L. SMITH, K. L. DEVRIES, D. J. BUSHNELL and W. S. BROWN, 348–355 (Aug.).
Tubes, Some Experiments on the Effect of Isolated Protuberances on Flow Through—D. F. YOUNG and C. C. SHIH, 225–229 (May).
Two-dimensional Study of Transverse Stresses in Axially Loaded Sections—H. B. PHILLIPS and C. L. MANTEI, 137–139 (March).

Ultrasonic Detection and Measurement of Fatigue Cracks in Notched Specimens—S. J. KLIMA and J. C. FRECHE, 193–202 (May).
Ultrasonic Thickness Gage—J. H. MEIER, 215–219 (May).
Ultrasonic Waves, Photoelastic Studies of, in a Large Plate—HUI PIH and L. S. SNYDERS, 186–192 (April).

Uniform Beams, An Analogue Technique for Determining Torsion and Flexure Functions of—BHASKAR NATH, 117–122 (March).

Vibration Testings of Continuous Systems for Resonant Frequencies, Some Implications of—KENNETH G. MCCONNELL, 321–326 (July).
Viscosity of Rocks, Experimental Determination of—MAHMOOD H. RANA, 538–549 (Dec.).

Wave-front Reconstruction Process, Moiré-fringe Multiplication by Means of Filtering and a—CESAR A. SCIAMMARELLA, 179–185 (April).

X-ray Stress Analysis, Experimental Methods of—D. N. FRENCH and B. A. MACDONALD, 456–462 (Oct.).
